

About Technical Sarvcheh

We are Technical Sarvcheh, a cohesive team of IT professionals with diverse technical backgrounds. Our workflow covers the entire lifecycle of a digital product. This includes research and design (Product and UI/UX design), website development and programming, and executing comprehensive digital marketing strategies. Our core objective at Technical Sarvcheh is to manage projects systematically and develop structured products.

Our Team

Fateme Kamali – Product Designer: A product designer dedicated to developing minimalist and human-centered digital products. Her workflow involves information architecture, designing user flows, conducting usability testing, and simplifying complex challenges into efficient interfaces using tools like Figma.

Shahrzad Jafari – UI/UX Designer: A UI/UX designer skilled in identifying user needs through research and interviews. Her expertise covers wireframing, prototyping, building design systems, and conducting usability tests to create simple and well-structured user experiences.

Shahrzad Taherzadeh – Python Developer: A Python developer experienced in building functional applications and working with databases like MySQL. She utilizes libraries such as Pandas and NumPy in her projects and is active in areas including data analysis, machine learning modeling, and GUI design using Tkinter.

Sajjad Yarahmadi – Front-End Developer: A Front-End developer focused on creating responsive and interactive websites and web applications. He implements user interfaces using technologies like HTML, CSS, JavaScript, React, and Tailwind CSS, prioritizing clean code architecture and cross-browser compatibility.

Roqaye Zare – Digital Marketer: A digital marketing professional experienced in SEO and precise data analysis. Her expertise includes content strategy, social media management, user acquisition campaigns, and utilizing Google Analytics to monitor and optimize performance.
